-I- SUBCELLULAR LOCATION: CELL SURFACE (POTENTIAL).

-I- ALTERNATIVE PRODUCTS: AT LEAST 3 ISOFGRMS; 1 (SHOWN HERE), 2/V AND 3/LS; ARE PRODUCED BY ALTERNATIVE SPLICING. THEY DIFFER IN THEIR C-TERMINAL NC1 DOMAINS.

-I- TISSUE SPECIFICITY: ALPHA 3 AND ALPHA 4 TYPE IV COLLAGENS ARE COLOCALIZED AND PRESENT ONLY IN BASEMENT MEMBRANES OF KIDNEY, EYE, COCHLEA, LUNG AND BRAIN.

-I- DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS DOMAIN (NC1) AT THEIR C-TERMINUS, FREQUENT INTERRUPTIONS OF THE G-Y-Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOMAIN (WHICH MAY CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL TO DOMAIN (WHICH MAY CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL TO DOMAIN (WIT (G-Y-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

-I- PTM: PROLINES AT THE THIRD POSITION OF THE TRIPLE REPEATING UNIT (G-Y-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.
                                                                                                                                                                                                                                                                                                          Reeders S.T., Smeets H.J.M.;

"Mutations in the type IV collagen alpha 3 (COL4A3) gene in autosomal recessive Alport syndrome.";

Hum. Mol. Genet. 3:1269-1273(1994).

-1- FUNCTION: TYPE IV COLLAGEN IS THE MAJOR STRUCTURAL COMPONENT OF GLOMERULAR BASEMENT MEMBRANES (GBM), FORMING A 'CHICKEN-WIRE' MESHWORK TOGETHER WITH LAWININS, PROTEOGLYCANS AND ENTACTIN/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "Reng L., Xia Y., Wilson C.B.;

N-LINKED GLYCOSYLATION SITE.

PTM: TYPE IV COLLAGENS CONTAIN NUMEROUS CYSTEINE RESIDUES WHICH ARE INVOLVED IN INTER- AND INTRAMOLECULAR DISULFIDE BONDING. 12 OF THESE, LOCATED IN THE NCI DOMAIN, ARE CONSERVED IN ALL KNOWN TYPE IV COLLAGENS.
```

PTH: Phosphorylated by the Goodpasture antigen-binding protein.
DISEASE: ANTIBODIES AGAINST THE NCI DOWAIN OF ALPHAJ(IV) MEDIATE
THE HUMAN AUTOIMMUNE DISEASE, GOODPASTURE SYNDROME, WHICH IS
CHARACTERIZED BY HEMATURIA AND PULMONARY HEMORRHAGE.
DISEASE: DEFECTS IN COL4A3 ARE ASSOCIATED WITH THE TYPE I
AUTOSOMAL RECESSIVE FORM OF ALPORT SYNDROME, AN HEREDITARY
GLOMERULONEPHROPATHY CHARACTERIZED BY PROGRESSIVE RENAL FAILURE,
HEMATURIA AND DEAFNESS. THE RECESSIVE FORM OCCURS EQUALLY BETWEEN
MALES AND FEMALES.

SUBGUNIT: OLIGOMERIC COMPLEX OF 6 SET OF HOMOTRIMERS.

SUBCELLULAR LOCATION: EXTRACTIONIAT.

MISCELLANEOUS: PULMONARY SURFACTANT CONSISTS OF 90% LIPID AND 10% PROTEIN. THERE ARE 4 SURFACTANT ASSOCIATED PROTEIN: 2 COLLAGENOUS, CARBOHYDRAFE-BINDING GLYCOPROTEINS (SP-A AND SP-D) AND 2 SMALL HYDROPHOBIC PROTEINS (SP-B AND SP-C).

SIMILARITY: CONTAINS A COLLAGENOUS DOMAIN.

SIMILARITY: CONTAINS A COLLAGENOUS DOMAIN.

"Characterization of a second human pulmonary surfactant-associated protein SP-A gene.";

Am. J. Respir. Cell Mol. Biol. 6:446-452(1992).

-i. FUNCTION: IN PRESENCE OF CALCIUM IONS, PSAP BINDS TO SURFACTANT PHOSEHOLIPIDS AND CONTRIBUTES TO LOWER THE SURFACE TENSION AT THE PHOSEHOLIPIDS AND CONTRIBUTES TO LOWER THE SURFACE TENSION AT THE AIR-LIQUID INTERFACE IN THE ALVEOLI OF THE MAMMALIAN LUNG AND IS ESSENTIAL FOR NORMAL RESPIRATION.

-i. SUBGUNIT: OLIGOMERIC COMPLEX OF 6 SET OF HOMOTRIMERS.

C; Comment: The first component of complement is a calcium-dependent complex of the ivation of Clr (enzyme), Cls (proenzyme), and the other eight components of complem C; Comment: The Clq subcomponent is composed of nine subunits, six of which are disurbiners of the C chain. Equimolar amounts of the A, B, and C chains are found after
                                                                                                                                                                                                                                                                                                                                                                                                                       complement subcomponent Clq chain C precursor - N;Alternate names: complement subcomponent Clq C;Species: Homo sapiens (man) C;Date: 22-May-1981 #sequence_revision 31-May-1 C;Accession: $14351; A03207 R;Sellar, G.C.; Blake, D.J.; Reid, K.B.M. A; Ritle: Completion of the amino acid sequences of the A and B chains of subcomponent A; Residues: 136-253 <RE4>
A; Molecule type: protein
A; Recidues: 136-253 <RE4>
A; Note: 176-Glx may also be present
C; Comment: The first component of complement is a calcium-dependent complex of the th
Ivation of Clr (enzyme), Cls (proenzyme), and the other eight components of complement
C; Comment: The Clq subcomponent is composed of nine subunits, six of which are disulf
(see PIR:C1HUQC) chain. Equimolar amounts of the A, B, and C chains are found after r
A;Map position: 1p36.3-1p34.1

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents human PRO344 (UNQ303), a protein encoded by the novel cDNA clone DNA40592 (see AAX87258). Amplification of DNA40592 was observed in primary lung tumours and in primary colon tumours, suggesting a significant role in tumour formation and growth. Antagonists (e.g. antibodies) directed to PRO344 may have use in cancer therapy. The invention identifies 14 genes (see AAX87254-67) that are amplified in the genome of tumour cells. Such amplification is expected to be associated with overexpression of the gene product and to contribute to tumorigenesis. The encoded proteins (see AAY06477-90) may be useful targets for the diagnosis and/or treatment (including prevention) of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies that bind the proteins are claimed and used in claimed cancer
                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                         diagnostic

                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes nucleic acids encoding PRO secreted and transmembrane proteins used therapeutically. The PRO proteins have cytostatic, anti-inflammatory, anti-proliferative and immunosuppressive activity. The proteins and polynucleotides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers. They can be used in a range of diseases related to proteins that they have homology with, e.g. a PRO protein having homology to complement proteins may be used in inflammatory responses.

attable from Albert

```
proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erthematous, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, Sjogren's systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases, inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, and the contraction of the contractions of the contraction
                                                                                                                                                                                                                                                                                                                                             Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus -
                                                                                                                                                                                                                                  The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO

AAC58397 to AAC58578 represent PCR primers and hybridisation probes in the isolation of human PRO sequences. AAC58579 to AAC58642 and AAB33414 to AAB33477 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.
                                                                                                    08-JUN-2000

It is isolated from human foetal lung tissue, cDNA library, identified using probes based on a consensus sequence DNA34398, derived from secreted protein extracellular domain (ECD) expressed sequence tag (EST). This clone is assigned ATCC deposit No: 209492. PRO344 functions as a neoplastic cell growth inhibitor and is used for treating tumours, using an effective amount of PRO655, PRO364 and PRO344. This composition is especially useful for treatment of human cancers such as breast, prostate, colon, lung, renal, ovarian and CNS, levitoris and molarcus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chen

The present sequence represents a novel human polypeptide. The specification describes novel polypeptides designated PRO201, PRO292, PRO327, PRO1265, PRO344, PRO343, PRO347, PRO357, PRO1117, PRO1112, PRO293, PRO853 and PRO882. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the identification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth and proliferation of reatment and diagnosis of neoplastic cell growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 61; Fig 10; 220pp; English

                                                                                                   polypeptides which are designated as PRO polypeptides are described the membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PRO; membrane bound protein; secreted protein; PRO357; PRO327; PRO243; PRO715; PRO241; PRO323; PRO299; PRO233; PRO344; PRO347; PRO355; PRO361; PRO365; transmembrane polypeptide; PRO359; screening; detection; inhibition; probe; primer; human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC PRO polypeptides, and to detect the presence of mammalian lung, colon, cc breast, prostate, rectal, cervical or liver tumours by comparing PRO CC polypeptide expression in a cell sample to that in a control sample. CC Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the CC tumour necrosis factor-alpha (TNF-alpha) from human blood, the CC proliferation or differentiation of chondrocytes, the proliferation or CC gene expression in perloyte cells, the release of proteoglycans from CC cartilage, the proliferation of inner ear utricular supporting cells or CC of T-lymphocytes, the release of a cytokine from peripheral blood CC monocytes (PBMCs), or the proliferation of endothelial cells. Some of CC the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide CC molecules involved in binding interactions. The polyproucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, CC transgenic or knock out animals and can be used in gene therapy.
